## DETAILED ACTION

### *Election/Restrictions*

Claims 2-5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 11/1/04.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 6, 7, and 8 are rejected under 35 U.S.C. 102(b) as being by Reilly (US 1,957,293). Regarding claim 1, see Figs. 1-4, where the pot shaped receptacle is 10, a holding ring is 15, the guideway is the inner surface of 10 which guides the ring between a raised and a lowered position. The limitation "Pot shaped" does not require any structure that is not in the reference. Pot can be any shape. Item 15 in the reference is annular and therefore satisfies the ring limitation. Moreover, it rings the interior surface of the pot shaped receptacle 10. Regarding claim 6, the cover is 13, which has control projections 34 which are in the control tracks 33. The control tracks are curved at their ends. Regarding claim 7, the control track arrangement is such that an opening movement of the cover is coupled with a lifting of the ring and a closing movement of

the cover is coupled with a lowering of the ring. Regarding claim 8, see the above discussions. The container is capable of holding a beverage receptacle.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Lehner (US 5,342,009). Regarding claim 1, see Figs. 1-5, where the ring is 19, the pot shaped receptacle is 6, and the guideway is 26. The guideway guides the ring 19 between a raised position as seen in Fig. 1 to a lowered position in Fig. 2.

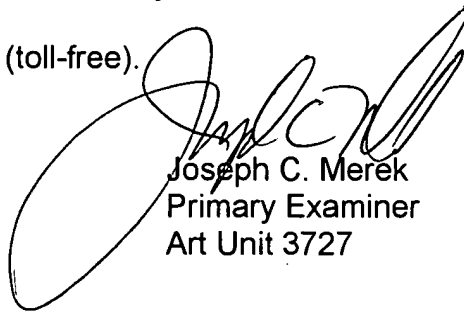

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mitchell (US 1,985,615) is cited for teaching a container with a pivoted lid and a ring where the container is intended to hold a bottle. Gehring et al (US 6,427,960) and Okazaki (US 5,190,259) are both cited for teaching vehicle cup holders with rings. Emerson (US 3,236,588) and Lindenbloom et al (US 2,031,115) are both cited for teaching containers similar to Reilly that are round in shape.
